Explanation of Symbols The symbols used throughout this book are bound to help you with your garden planning. They make it easy to tell at a glance the character of the plant and their adaptability to various growing conditions.

(A) = Annual. Annual flowers complete their life circle within one growing season. They must be sown every year.

(B) = Biennial. These require two years to bloom. Seed sown during one season will produce flowering plants the second year. Occasionally they live longer than two years.

[HHP] = Half-Hardy Perennial. These cannot stand much frost but may be kept alive by bringing indoors, placing in the cold frame, or covering securely during the winter.

[HP] = Hardy Perennial. These last for several years, withstanding considerable frost provided the soil is well drained.

[TP] = Tender Perennial. Tender perennials may be kept growing throughout the year in the house or greenhouse. Many of them are showy bedding plants for a summer and fall display.

§ = Climbing Plants. Climbing and trailing plants which are best grown with a support on which they can climb.

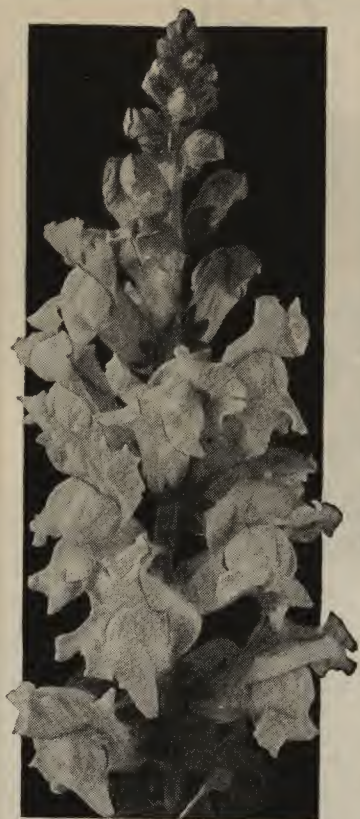

△ = Suited to Rock Garden. Most plants suited to rock gardens are also desirable for dwarf beds and borders. The smaller the rock garden the smaller the plants should be.

● = Suited to Semi-Shade. Most plants suited to semi-shade also do well in a sunny exposure. Semi-shade means some sun for part of the day or a location where the plants receive ample indirect light from above.

● = Suited to Shade. Few plants do in dense shade but those marked in this way will be found quite satisfactory. There are no annuals which will bloom in deep shade.

+ Seeds marked with a + often are sown in late fall outdoors to germinate the following spring. Spring germination is quickest if they are placed in water and set in the freezing chamber of an electric refrigerator. To secure the beneficial effect of alternate freezing and thawing, thaw them out once a week and then freeze again. They will be ready for sowing after two to three weeks of this treatment.

The Popular Snapdragons

Snapdragons are great favorites. They are easily grown from seed blooming continuously throughout the summer and fall. If protected during the winter, midsummer sowings will produce particularly fine flowers during the following spring. Just cover them with a bottomless box and a pane of glass over the top. The germination of Snapdragon seed has proved to be easiest if finely sifted coal ashes are used as a seed bed. Prepare your seed pan in the usual way and add a layer of finely sifted coal ashes ¼ inch deep on the top. Sow the seed thinly on top of the ashes and water carefully. Keep moderately moist in a fairly warm place until the seedlings appear.

Six Rust-Resistant Maximum Varieties

The development of these new Rust-Resistant Snapdragons is one of the greatest accomplishments ever made by plant breeders. It is possible now to have them grow to perfection even where the old strain has proved a complete failure due to rust infection. These new Maximum varieties grow about 3 feet in height and bear an abundance of long, strong flower stems set with giant blooms of perfect form. As they are highly Rust-Resistant, success with them is most certain.

They bear numerous semiglobular, mostly very double flowers all of the largest size, making them of great value in large beds, borders, etc. Grown under favorable conditions they remain in bloom from early summer to late autumn. Bush Lima Beans

Culture—Lima Beans are very susceptible to cold and seeds should not be planted until the ground has become thoroughly warm. Being gross feeders, they should be sown on well-enriched land, with the rows 2 $\frac{1}{2}$ feet apart, placing the beans six inches apart in the row, **eye down**. In light soil, cover about one inch deep, less on heavier soils. A good fertilizer applied at the rate of 20 pounds to every hundred feet of row, when the plants begin to bloom, will materially increase the yields. Hill plants slightly earlier in the season to hold the pods off the ground. **One pound will plant 50 feet of row.**

111 Dreer's Wonder Bush Lima

A most desirable Bush Lima Bean because it is extremely early and very productive. The plants are of strong upright growth, heavily laden with large pods many of which contain 4 beans each. Many gardeners pronounce the broad, flat beans superior in flavor to those of the round, thick-seeded varieties. We highly recommend it and suggest that you give it a thorough trial this year. Pkt. 10c; $\frac{1}{2}$ lb. 25c; lb. 40c; 2 lbs. 75c; 5 lbs. \$1.55, prepaid.

107 Fordhook Bush Lima

This splendid variety is well known wherever Lima Beans are grown as it combines productiveness with choice quality. The plants make a vigorous, upright growth so that the pods are held well above the soil surface. This keeps them clean and avoids rust and rot even during wet seasons. The pods are borne in clusters which accounts for the productiveness of this splendid variety. Each pod is about 5 inches in length and contains 4 or 5 very thick, light green, oval beans which have a distinctive rich nut-like flavor quite unlike any other variety. Fordhook Bush Lima is a quick seller on all markets and home gardeners favor it for the heavy yield it will give and the exceptionally fine flavor of the thick beans. Pkt. 10c; $\frac{1}{2}$ lb. 25c; lb. 45c; 2 lbs. 80c; 5 lbs. \$1.60, prepaid.

Fordhook Bush Lima

McCrea Bush Lima

Pole Lima Beans—For Extra-Heavy Crops

Culture—Pole Limas are even less hardy than the Bush type and should not be planted until toward the end of May or when all danger of frost is past. Set the poles about 4 feet apart each way and plant 6 to 8 beans, eye downward, around each pole. When plants are up, thin out to 3 plants to a pole. Pinch off the ends when plants overrun the top of the poles. It is good practice to use a shovelful of rich, light, well-rotted compost to each hill. **One pound of seed will plant 75 to 100 hills.**

117 Dreer's Improved Pole

The pods and beans are similar to the well-known Fordhook Bush Lima. Each pod contains 4 or 5 thick and attractive, light green beans. Pkt. 10c; $\frac{1}{2}$ lb. 25c; lb. 45c; 2 lbs. 85c; 5 lbs. \$1.75, prepaid.

The beans are attractive and enjoy great popularity on account of their splendid flavor. Pkt. 10c; $\frac{1}{2}$ lb. 25c; lb. 40c; 2 lbs. 75c; 5 lbs. \$1.55, prepaid.

122 Leviathan Early. The earliest large-podded Pole variety in cultivation and an enormous cropper. The pods are 5 to 6 inches long and contain 5 or 6 beans each. The shelled beans are of excellent quality. Pkt. 10c; $\frac{1}{2}$ lb. 25c; lb. 40c; 2 lbs. 75c; 5 lbs. \$1.55, prepaid.

All Vegetable Seeds are sent **PREPAID.**

Pole or Running Beans

Culture—Pole Beans are vigorous growers and will produce a heavy crop of beans if grown on fertile ground which has been enriched with well-rotted manure or a complete fertilizer. Appetizing, Crisp, Cool, and Refreshing

One ounce of seed will produce about two thousand plants. For an early supply start seed of an early variety indoors in flats during February. These mature later than the earliest varieties continuing the crop until frost puts an end to their bearing. While all we list are good, we recommend particularly Marhio and Rutgers which are still comparatively new.

897 Crimson Cushion or Beefsteak. One of the largest of the bright red Tomatoes, very solid and smooth. Similar to Ponderosa, except that the color is rich crimson. Pkt. 10c; $\frac{1}{2}$ oz. 30c; oz. 50c; $\frac{1}{4}$ lb. \$1.50.

910 Globe, Dreer's Select Strain. The fruits are perfect globes in shape. They average 6 ounces each and are borne in clusters of 4 to 6. It is one of the most solid of all tomatoes. The skin is an attractive pink or purple and the deep red flesh has a delightful flavor. Our strain is extra-choice. Pkt. 10c; $\frac{1}{2}$ oz. 25c; oz. 45c; $\frac{1}{4}$ lb. \$1.35.

912 Golden Ponderosa. Very large fruits of splendid quality. Solid, rich golden yellow flesh of very mild flavor. Most attractive when sliced and served with a red variety. Pkt. 15c; $\frac{1}{2}$ oz. 35c; oz. 60c; $\frac{1}{4}$ lb. \$1.75.

926 Marhio. A choice new, dark rosy pink selection from Marglobe embodying its wilt-resistant qualities. Round fruits with thin skin and pink flesh. An enormous cropper of attractive appearance. Pkt. 10c; $\frac{1}{2}$ oz. 30c; oz. 50c; $\frac{1}{4}$ lb. \$1.50.

923 Marglobe

This fine second-early produces large, smooth, meaty, globular, red fruits which ripen evenly and are free from cracks. An extremely heavy cropper, particularly valuable in districts troubled with rust and wilt as in many of the Southern States, because it is decidedly wilt-resistant. Pkt. 10c; $\frac{1}{2}$ oz. 40c; oz. 70c; $\frac{1}{4}$ lb. \$2.00.

927 Oxheart. An attractive variety of most distinct form, producing deep heart-shaped fruits some of which are of immense size and weight. Solid, deep rose-red flesh with few seeds, and extremely mild and free from acid. A fine late-maturing home garden sort, bearing up to frost. Pkt. 15c; $\frac{1}{2}$ oz. 45c; oz. 85c; $\frac{1}{4}$ lb. \$3.00.

930 Ponderosa. The largest Tomato grown and always a profitable and popular late sort for the home garden. Large purplish pink fruits of fine flavor. Pkt. 15c; $\frac{1}{2}$ oz. 35c; oz. 60c; $\frac{1}{4}$ lb. \$2.00.

937 Rutgers' Tomato

A highly commended variety of recent introduction developed by Prof. Schermerhorn of Rutgers' College, New Brunswick, N. J. A consistently heavy cropper with uniform, globular, smooth, and very solid fruits averaging about 6 ounces each. Ripens very evenly from the inside out and is of a sparkling red color. Suitable for canning, market, and for the home garden. Gives a delicious, highly colored juice. Be sure to give this a trial. Pkt. 15c; $\frac{1}{2}$ oz. 35c; oz. 60c; $\frac{1}{4}$ lb. \$1.75.

942 Selected Stone. Probably the most widely known Tomato in the country. Very dependable and will produce a large crop of solid deep red fruits. A splendid canner. Pkt. 10c; $\frac{1}{2}$ oz. 25c; oz. 40c; $\frac{1}{4}$ lb. \$1.00.

Shrubs are as much a part of the well balanced garden as a lawn or flower border. Many of them are as decorative as any ornamental foliage plant, while others are highly attractive on account of their flowers. In the well arranged shrubbery border there always will be something of interest no matter what the season of the year. They have many uses such as a dividing line between the flower and vegetable garden, or between the lawn and uncultivated land beyond; as a background to a flower garden; for hiding an unsightly fence or foundation. As height varies according to condition we give the approximate height as follows: D=Dwarf (less than 4 feet tall); M=Medium (4 to 8 feet tall); T=Tall (8 feet and taller).

A new and easy way to train all kinds of vines to brick, stucco, stone, cement and wood walls without nails or holes because the supports are cemented to the wall with a special material supplied for this purpose. This special cement is not affected by any weather conditions. The vines are held in place by copper wire loops which may be bent easily. Though the supports will stay in place they may be removed from stone, stucco, or cement if needed by tapping lightly from the side with a hammer. This will cause them to come off leaving a clean surface without nail holes or any other unsightly marks. Your choice of gray or white, per box of 25 including cement \$1.00.

'TWIST-EMS'

Twist-Ems save the tedious work of tying plants with twine or raffia and cutting each piece with a knife or shears. Simply put around the stem and support, twist, and the plant is securely fastened. The wire running through the center of the tape makes them unbreakable and they cannot become unfastened while the tape protects the stem against injury. Their deep green color blends with the foliage and makes them altogether inconspicuous. Twist-Ems are the most convenient and easiest way to support all kinds of plants in a quick and unobtrusive manner. 4-inch size, 250 for 25c; 1000 for 85c. 8-inch size, 125 for 25c; 1000 for \$1.65.

Vitamin B-1

Produces Amazing Reinvigorated Root Growth

The truly amazing effects of pure crystalline vitamin B-1 on plant growth represent one of the newest and most exciting discoveries ever made. Vitamin B-1 is not a fertilizer nor is it any other form of plant food. However, it enables plants to gain the greatest possible benefits from the soil in which they are planted. In addition to its marvelous influence upon root growth it has a highly beneficial effect when sprayed upon seedlings. Furthermore thin-shelled seeds soaked in the proper concentration for 24 hours are tremendously stimulated by it. Full instructions are sent with each package.

Plantet

Soiless Growth Composition

Plantet is a perfectly balanced, completely soluble plant food for use in growing plants without soil. It has been used successfully in growing many varieties of flowers and vegetables possessing several exclusive features which make it especially reliable as a plant nutrient. The growing of plants in water is known as aquaculture or hydroponics. It represents a very interesting and successful method of plant culture.

Equally good results are obtained where Plantet is used as a nutrient solution for plants being grown in sand or cinders. The gardener not interested in these methods will find it highly valuable as a complete plant food for house and garden plants. Treated Untreated
Treated plant has close to three times
the root strength of untreated one.

The Hormone treatment of Dreer's Lawn Grass Seed induces quicker germination and more vigorous growth. The effect is most marked upon the roots of the young plants and as every gardener knows an extensive, well-developed root system is the foundation for a successful lawn able to withstand seasonable adversities and disease. Even with hormone treatment thorough soil preparation, fertilizing, and watering, is still very important.

Follow the Advice of Experts and Sow Dreer's New Improved Hormone-Treated LAWN GRASS MIXTURES
